Sellora: drag sections & quick section menu

Where: Online Store > Themes > Customize.

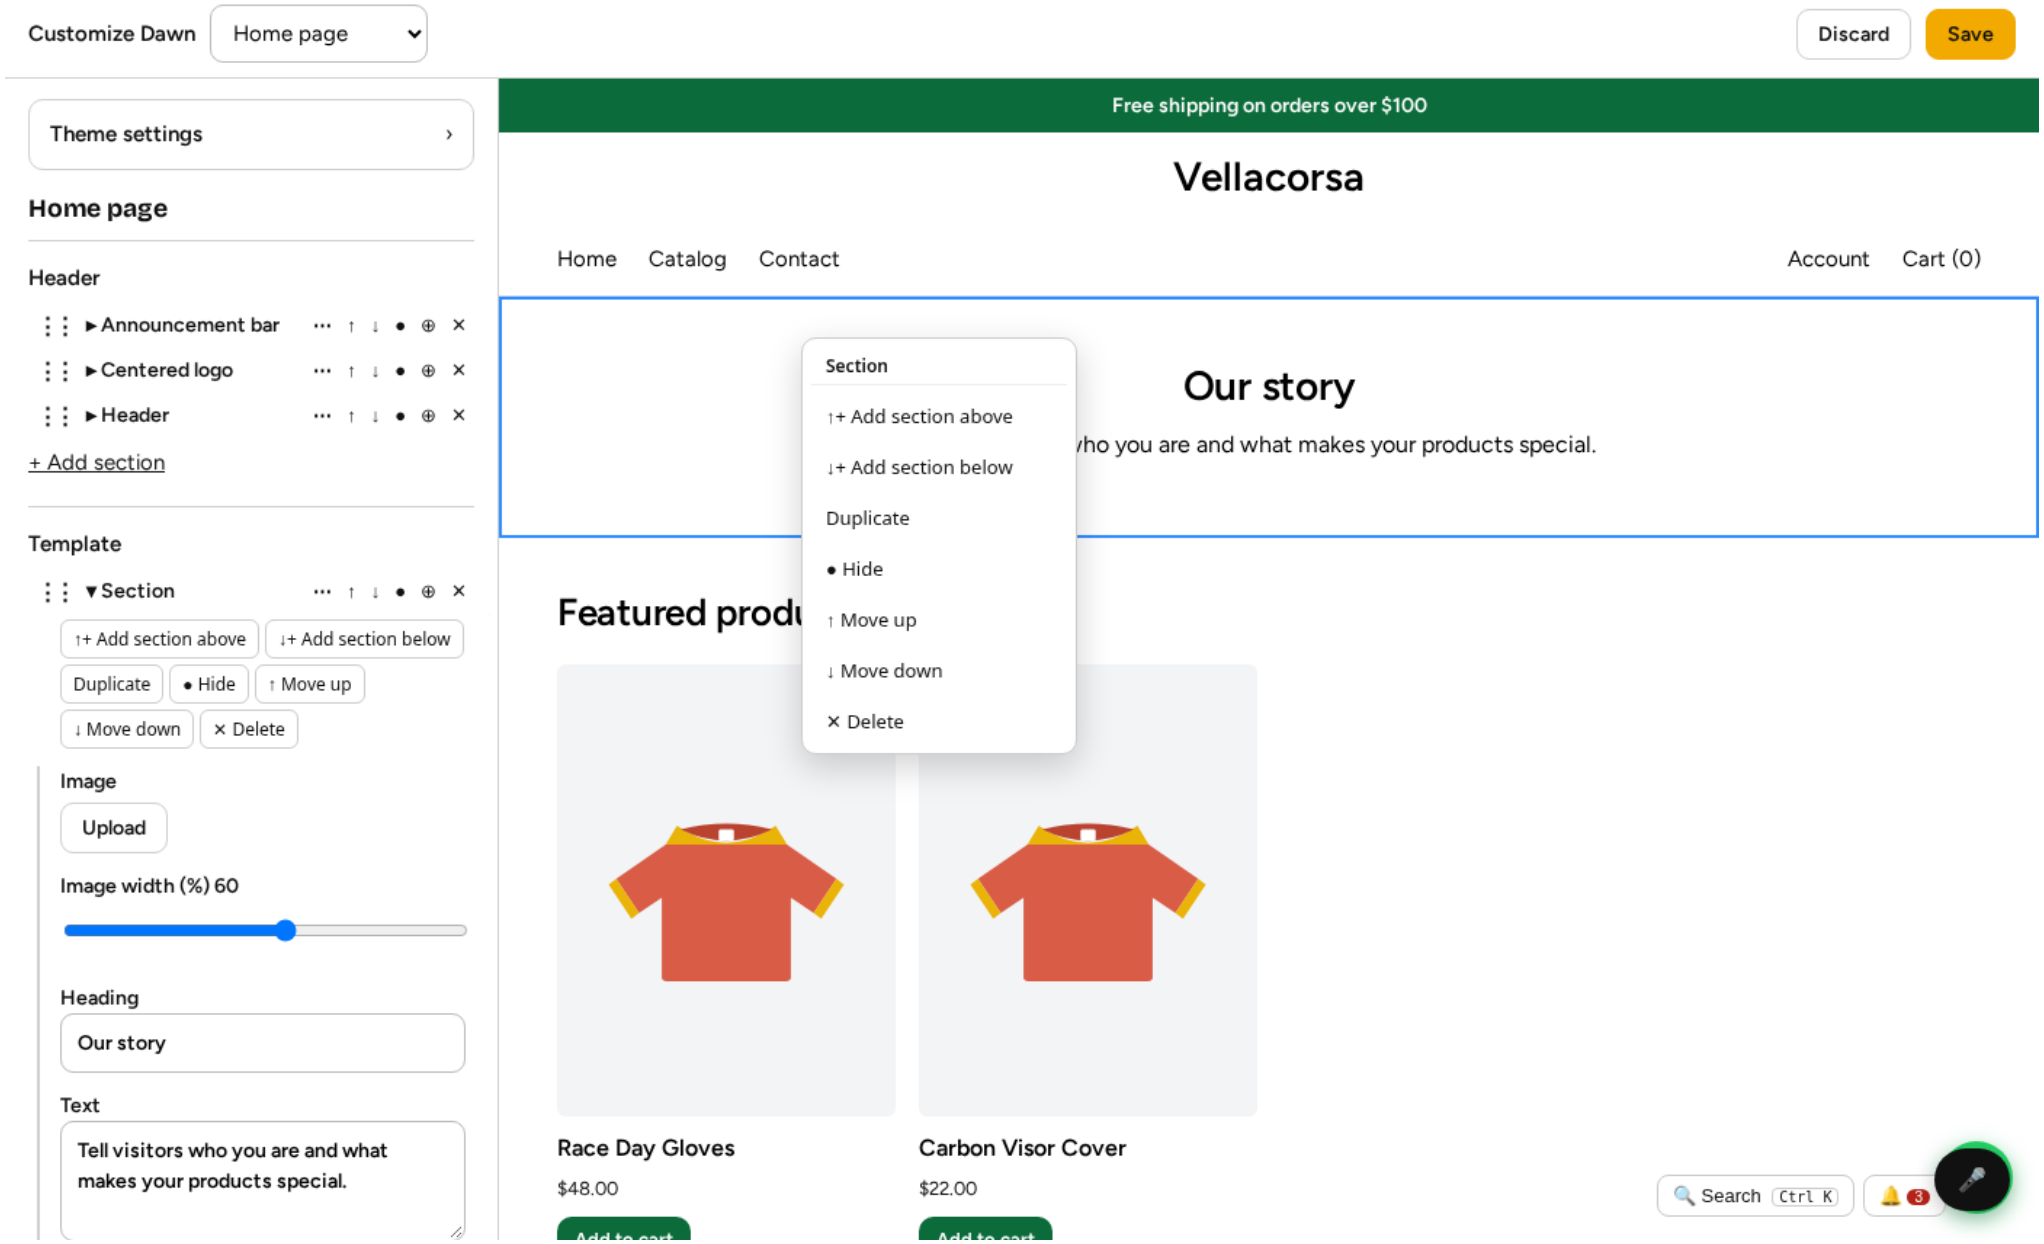

1. Drag to reorder: hold the :: grip on the left of any section and drag it up or down.
   A green line shows where it will drop. The list scrolls by itself near the edges. Works with mouse and touch.
   The preview updates instantly and the new order is saved. The old up/down arrows still work,
   and with the grip focused you can press Alt + Up / Alt + Down.
2. Click a section (in the left list or in the preview) to get a small menu:
   Add section above, Add section below, Duplicate, Hide/Show, Move up, Move down, Delete.
   "Add section above/below" opens the section picker and puts the new section exactly there.
3. In the preview, hover a section and click the black "+ Add section" button on its top or bottom edge.

All labels stay black on white (readable in dark mode too). Tests: 23/23 new checks pass, all older tests pass.

Dragging "Hero: Marquee" - the green line shows the drop spot

Click a section: menu in the preview + action buttons in the list

Hover in the preview: "+ Add section" between sections
